

Auto Sound Diagnosis Report

Grinding Noise

Diagnosis:

Grinding usually indicates that brake pads are fully worn down, causing metal-to-metal contact, or it may come from damaged wheel bearings.

Personalized Message:

Grinding is serious it's telling you that components are already in metal contact.

Gravity Level:

Very High immediate attention required.

Danger Level:

Very High driving in this state can severely damage your brakes or cause a wheel to seize.

Rough Cost Estimate:

\$300 - \$900 depending on parts and severity.

Next Recommended Step:

Avoid driving further. Have the vehicle towed if necessary. If capable, check the rotor condition and brake pad backing. Seek professional repair immediately.
