

Auto Sound Diagnosis Report

Ticking Noise

Diagnosis:

Ticking may be related to low engine oil levels, worn valve lifters, or timing issues. It usually changes with engine RPM.

Personalized Message:

Tick-tick-tick... That sound is often the voice of your engine needing lubrication or maintenance.

Gravity Level:

Medium requires investigation.

Danger Level:

Medium to High long-term neglect could damage the engine.

Rough Cost Estimate:

\$80 (oil + filter) to \$1000+ for valvetrain repairs.

Next Recommended Step:

Check your oil level immediately. If low, top up with the correct oil type. If the noise persists, schedule a diagnostic with a technician to inspect the valvetrain.
